# WESTBUILT HOMES

## CHALLENGE

Westbuilt Homes were experiencing echoes and reverberation in their boardroom. This made it challenging and uncomfortable when holding meetings with clients – both on site and videoconferences. The company was looking at refreshing and redecorating the space, as part of the project wanted to improve the current acoustic situation.

## SOLUTION

Calando Acoustic Fin Baffles were installed on the ceiling, to add a highly-rated absorptive surface. The Fin Baffles also added a decorative statement piece, and assisted in the company's goal to modernise the room.

## FEEDBACK

"We used Avenue Interiors to supply some ceiling baffles in our board room and we chose to install them ourselves. We found their service exceptional from start to finish. Delivered in full, in spec and on time. They supplied all the parts to install the baffles on an existing raked ceiling. The baffles definitely sorted the sound issues we were having! I would highly recommend this company and well worth spending the money. Good work Avenue Interiors!"
