
NEW LIFE CHRISTIAN CHURCH

CHALLENGE

New Life Christian Church in Warrnambool were struggling with noise in their foyer. The area houses a café, and is used for meals, coffees and general gatherings. As the foyer was constructed of all hard surfaces, any sound made in the room was amplified and reverberated around the room.

SOLUTION

25mm Calando Panels and 12mm Calando One Panels were installed on the ceiling and walls, to reduce reverberation and volume of conversations.

FEEDBACK

“We are all very happy as we can now talk to each other using our normal voice, not shouting to try and make ourselves heard. There is still the airborne noise from the people sitting a couple of metres or so away but that is to be expected. There is no echo.”
