
NUMURKAH KINDERGARTEN

CHALLENGE

Numurkah Kindergarten were struggling with noise in their child care room. The large size of the room, and the fact that it was all hard surfaces meant that any sound made was amplified and reverberated around the room. Their foyer area was also all hard surfaces, and very echo-y.

SOLUTION

25mm Calando Panels and 12mm Calando Acoustic Fabric were installed on the ceiling and walls, to reduce reverberation and volume.

Along with this treatment to the child care room and foyer, Avenue installed extra Acoustic Fabric in the office (so staff could enjoy a quieter working environment) and in the hallways (to be used as noticeboards).

FEEDBACK

“It’s fantastic! It makes a massive difference to the noise level in the room, it’s become a workable environment. The office feels warmer and quieter to work in. We’re very happy, so pleased we got it done and completed so quickly and easily. It’s been a great asset to our child care and kindergarten program.”
