# TASMANIAN HEALTH

## CHALLENGE

Tasmanian Health approached Avenue Interior Systems to visit their site to design a solution for their noise challenges. Avenue Interior System is a national company, and we were able to use the capabilities of our Tasmanian installer and video conferencing to obtain the information required for our design team.

Tasmanian Health approached Avenue as their common areas were very loud and reverberant. Any noises made (in shared rooms, corridors or bedrooms) spread throughout the facility and were disruptive and uncomfortable for staff and residents.

## SOLUTION

Absorptive panels were installed on the walls and ceilings of the common areas, hallways and bedrooms. Acoustic door seals were installed on the bedroom doors to prohibit the doors from rattling, and to reduce the sound which could transfer between the spaces.
