# CHEVRON ADVANCED MEDICAL

## CHALLENGE

Chevron Advanced Medical wanted a decorative, multipurpose solution for their waiting room. The centre displays signage and information on the outside of their front window and doors, and wanted something to cover the glass so that it looked nice from the inside. They also wanted some sound reduction within their waiting room, and the ability to pin onto whatever cover was used, so that they could make the most of the space to display posters and information.

## SOLUTION

Calando Acoustic Fabric, a colourful, sound absorbing and pinnable material, was installed on the inside of the windows and door. The fabric was installed in 2 colours and in a certain layout to create an aesthetic statement piece.

## FEEDBACK

"We installed acoustic felt against our windows, which doubles up as a pinboard. It was a very a professional job and looks great too. Thank you - from the team at Chevron Advanced Medical."
